

LAKE MANAGEMENT STATUS REPORT

Brock Lake	Tazewell County	Water number 16007
OWNERSHIP: Village of Mackinaw	10 acres	DATE: 11/20/2024

1. LIST OF SPORT FISH REGULATIONS IN EFFECT
2. LIST OF FISH MANAGEMENT ACTIVITIES COMPLETED
3. LAKE MANAGEMENT PLAN PROGRESS TABLE
4. RECOMMENDATIONS FOR OBSERVED PROBLEM TRENDS

1. Fishing Regulations:

1. All Fish – 2 pole and line fishing only
2. Largemouth bass – 12-15” protected slot, 3 fish daily harvest with only 2 under 12” and 1 over 15”
3. Channel Catfish – 3 fish per day
4. Bluegill/Redear Sunfish – 25 fish per day

2. Management Activities:

1. Aquatic vegetation treatment on 5/28/24
2. Stocked 250 channel catfish at 4” on 9/10/2024.
3. Completed a fall electrofishing survey on 10/3/24.

3. Lake Management Plan Progress Table

	2017	2019	2020	2021	2022	2023	2024	Management Objectives

4. Brock Lake was sampled on 10/3/2024 for 30 minutes with Pulsed-DC electrofishing. Submerged vegetation was under 30 percent with chara and coontail being the dominant species.

Largemouth Bass

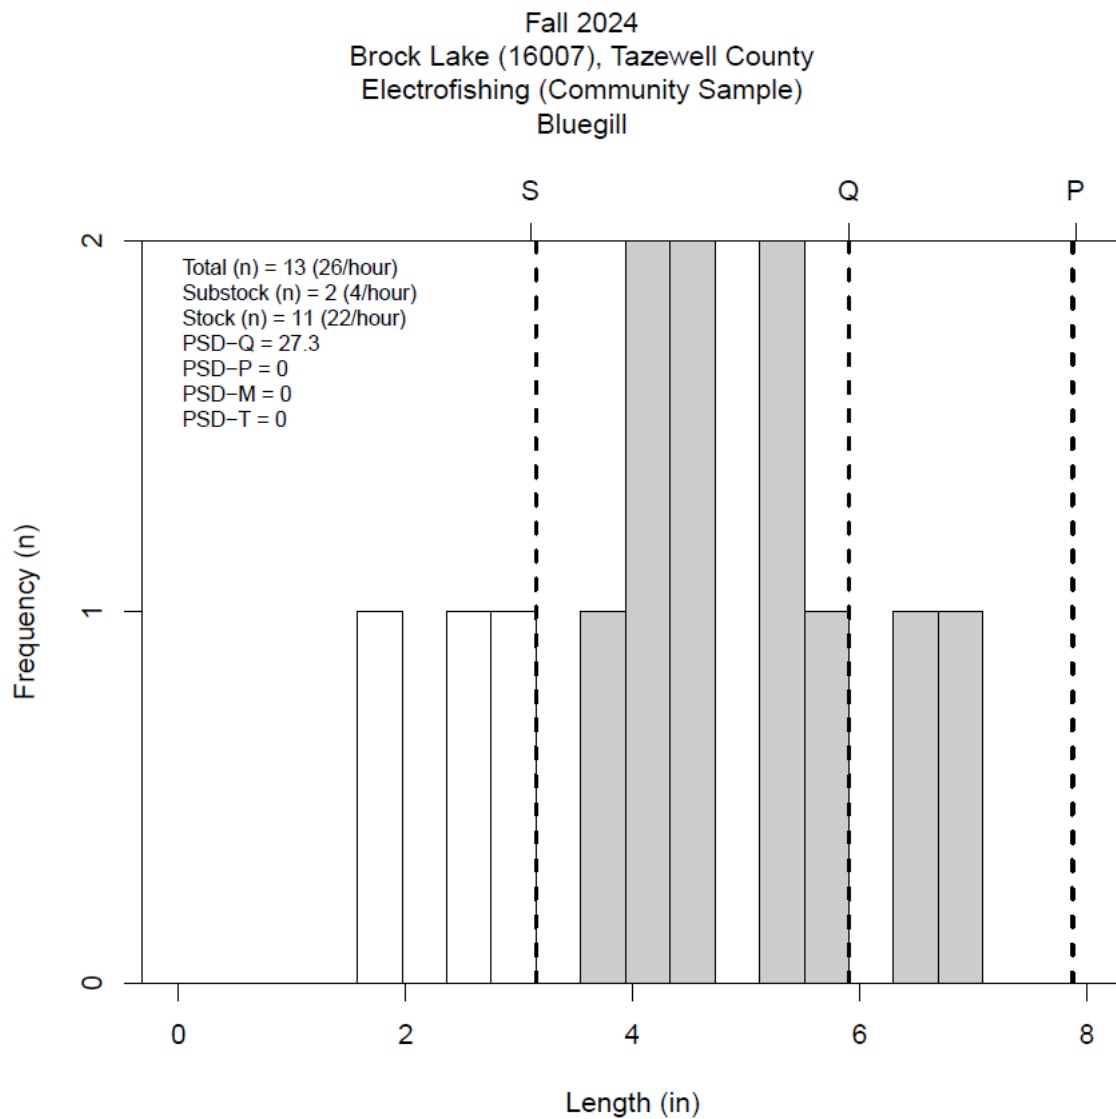

In 2024, the largemouth bass population was evaluated by 138 bass collected by Pulsed-DC electrofishing. The largemouth bass population continues to be defined by a high percentage of fish from 8 – 12 inches with a body condition of 85. We did not collect any bass over 13 inches despite a June 2020 stocking of adult fish. This stocking was a group of 75 brood bass that were being retired from Jake Wolf Fish Hatchery. With an average size of 4lbs these fish should provide some great fishing action as well as introduce a larger size class of bass that previously did not exist in the lake. The collection rate was 276/hr which indicates a high density.

At this time the current bass population could use thinning of bass that are under 12 inches in length. Most of the current bass population is under approximately 12 inches in length and growing slowly. This is due to a very high density of bass all competing for the same food resources. Effective April 2021 the bass regulation was changed to a protected slot limit from 12 to 15 inches and allowing the harvest of 2 bass under 12 inches per day and 1 bass over 15 inches per day.

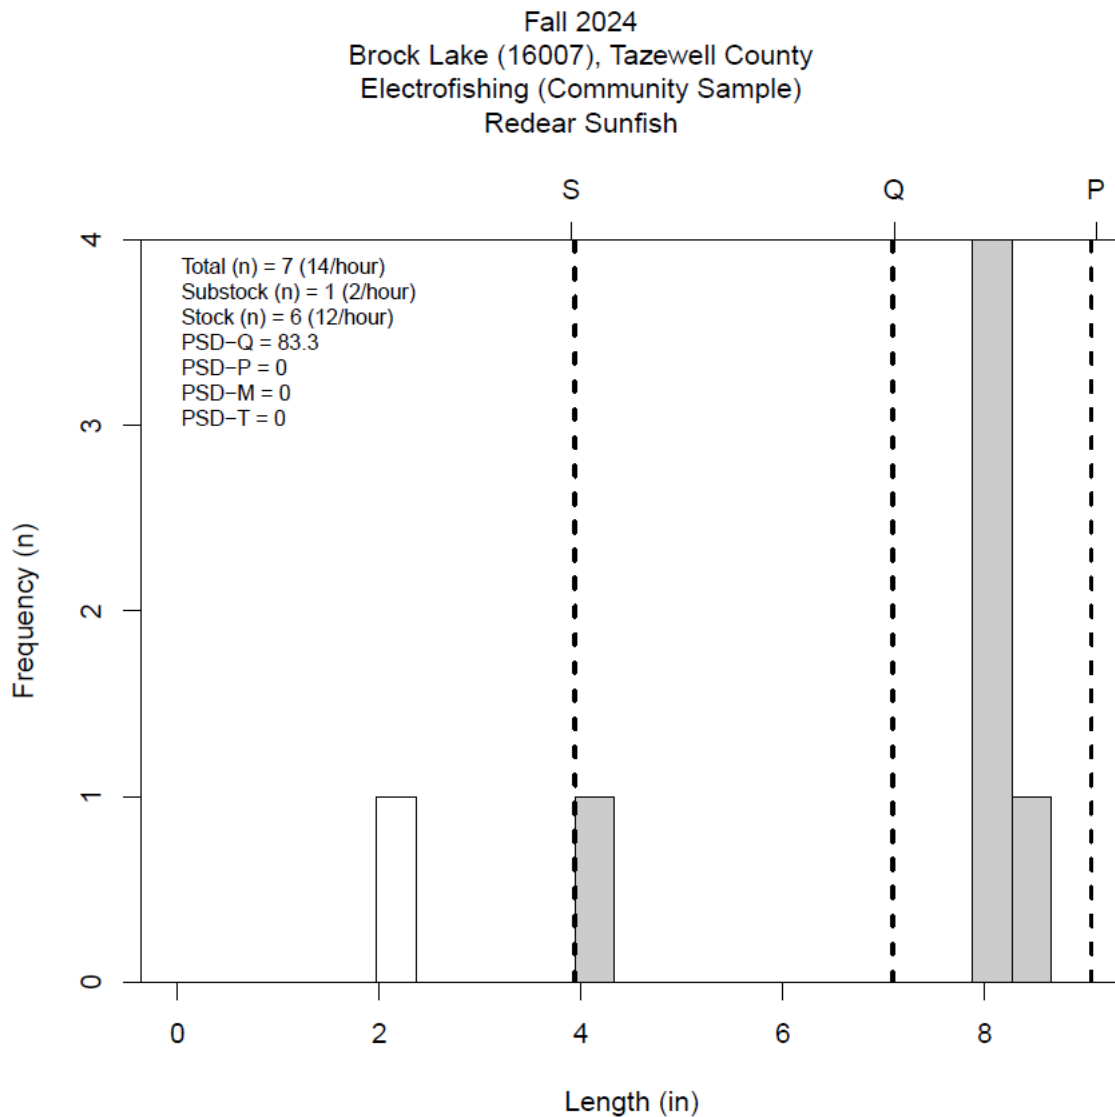

Bluegill

The bluegill population was evaluated by 13 fish in the fall electrofishing survey. They ranged in size from 2 to 7.2 inches in length with an average body condition rating of 68. The current bluegill population is rated as good. An improvement in the bass population size structure as well as continued aquatic vegetation management will help maintain this good bluegill size structure.

Redear Sunfish

Brock lake currently has a very dense snail population, making it a prime candidate for redear sunfish. The initial stocking of redear took place in 2021. In the 2024 sample, 7 redear were collected with the largest being 8.6 inches. This species should provide great fishing opportunities in the coming years.

Black Crappie

The black crappie population was evaluated by 1 crappie at 11.6 inches. The body condition was 90. The high-density bass population has helped in maintain a low-density crappie population with a good size structure of 9-11" fish.

No harvest or length limits are necessary for the crappie population currently.

Channel Catfish

No channel catfish were collected in 2024. IDNR has added Brock Lake to the channel catfish stocking schedule and the first batch of 8-10" catfish were stocked in August 2020.

Aquatic Vegetation

Brock lake historically has had an overabundance of submerged aquatic vegetation. This can lead to the stunting of fish populations. A herbicide treatment of 7.5 gallons of diquat dibromide on 5/28/2024 had excellent results and reduced the amount of vegetation for the duration of the fishing season. This vegetation control should greatly help the fishery over the next few years.

Brock Lake Stocking Record			
Year	Species	Size (Inches)	Quantity
2024	Channel Catfish	4	250
2022	Channel Catfish	7.2	250
2020	Largemouth Bass	17	75
	Channel Catfish	8	264
2016	Bluegill	1	13,933
	Largemouth Bass	1.5	1,500
2010	Channel Catfish	3	2,024
	Largemouth Bass	5	229
2006	Largemouth Bass	2	1,150
	Channel Catfish	4	2,000
	Bluegill	3	10,500

Proposed management for 2025:

1. Complete a fall electrofishing survey.
2. Complete herbicide treatments as necessary.
